

Clarus™

ANTIREFLECTION COATED LENS

Clarus™

ANTIREFLECTION COATED LENS

Introducing

CLARUS is specially designed antireflection coating lens

- It reduced reflection up to 99%
- CLARUS is very useful in night driving
- CLARUS coating consist of hydrophobic layer which gives slippery effect on lens which avoids water drops to stick on lens
- CLARUS coating is useful for computer use
- CLARUS improves cosmetic appearance

AntiSTAT™

A COATING WITH CLEAR VISION

Antistat coating- Most plastic are inherently insulating, which cause charge to build up on their surfaces. Because of this static charge it attracts dust. This frequently accumulated dust require frequent cleaning of lenses, it increases chances to scratch lenses. In Antistat we apply antistatic layer on antireflection coating layer which resist dust or any other small particles. So user don't clean lens frequently causes less chance of scratches on lenses. This Antireflection coating comes with special feature of antistatic coating and superhydrofobic coating

- Very easy to clean
- Oil and dust repellent
- Improved vision

HardX™

LENS WITH EXTRA PROTECTION

HardX is scratch resistant coating on lenses with extra protection. It uses deep hard coat technology in controlled temperature and humidity, increases scratch resistance and quality.

Complete robotic process minimize human error and manual handling of lenses.
